

# The easy way to mop your floor.

Whether you use a strip mop, flat mop or sponge mop, save time and get better results by following these simple steps to guarantee excellent particle pick up.

## Step 1.

For optimum floor cleaning results, mix Hot Water with Methylated Spirits or White Vinegar in a bucket.

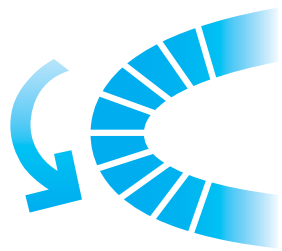

Start at one side of the room and work your way across from side to side, (to the length of the handle), whilst walking backwards as you mop.

**Diagram 1:** Figure '8' motion.

## Step 2.

Create an angle curve that illustrates a side-on flat figure '8' (see Diagram 1).

At the end of each sideways mop, rotate the mop on a 180 degree angle and continue to mop towards you in the opposite direction. (left and Diagram 2).

*Using this motion will ensure excellent particle pick up, removing dirt, hair and small particles.*

## Step 3.

Rinse and continue steps until you have achieved the desired clean finish.

**Diagram 2:** Slightly rotate the mop through a 180° curve as you continue to change direction.
